

MANUFACTURED HOME COMMUNITY PROGRAM

Department of Safety and Professional Services oversees several manufactured home community functions: 1) licensing of new manufactured home communities and renewing current licensed communities; 2) regulation of manufactured home communities; 3) the investigation and resolution of manufactured home community complaints; 4) plan review for private sewage systems serving manufactured home communities; 5) plan review for some plumbing system features; 6) site installation features and basement or addition construction requirements; 7) licensing of manufactured home manufacturers; and 8) after July 1, 2000, titling of manufactured/mobile homes.

GENERAL INFORMATION

The general information of manufactured home communities falls under Wisconsin State Statute 101.935 and Wisconsin Administrative Code SPS 326.

Wisconsin Administrative Code SPS 326 regulates the license fee structure per number of mobile home park/manufactured home community sites as follows: 3 - 20 sites \$250; 21 - 50 sites \$450; 51 - 100 sites \$700; 101 – 175 sites \$900, and 176 sites or more \$1000.

§ 101.935 also sets guidelines for license renewals and allows for a village, city, or county to qualify as an agent to perform the licensing and regulating for the department.

Wisconsin Administrative Code SPS 326 states the requirements for designing and modifying a manufactured home community and the general upkeep requirements. For example, the garbage must be disposed of as often as necessary to prevent decomposition or overflow. SPS 326 also refers to the appropriate codes for private sewage systems at DSPS and private water supplies at Department of Natural Resources.

LICENSING

A license is required if three or more manufactured homes are located on a plot or plots of ground. To be licensed as a manufactured home community, the licensee must submit an application packet and meet the requirements set forth in Wisconsin Administrative Code SPS 326. Some of the requirements to be met are:

- ◆ Submit 2 sets of plans and one set of specifications of the manufactured home community.
- ◆ For private water supplies, submit a safe water sample result in accordance with NR809.
- ◆ For private sewage systems, submit an approval letter from DSPS, Industry Services Division, in accordance with SPS 382 and 383.

The information provided is reviewed and an inspection of the manufactured home community may be ordered. If approved, a two-year license is issued and the licensee is provided with copies of applicable state regulations governing mobile home parks/manufactured home communities. To renew a mobile home park/manufactured home community license, a notice is sent out and the fees must be submitted.

COMPLAINTS/INSPECTIONS

The Division of Industry Services also receives mobile home park/manufactured home community complaints from both community residents and community owners. The complaint process involves the completion of a Industry Services complaint form and, if necessary, an inspection of the mobile home park/manufactured home community. If a State Statute or Administrative Code within our jurisdiction is violated, Industry Services may commence formal action, such as a written order to correct the violation, final denial, suspension, or revocation of the manufactured home community license. An inspection will be conducted on a manufactured home community when there is a new community, expansion, or a complaint. The contact number is 608-785-9335.

AGENTS

In addition, there are local and county health departments who serve as agents of the Industry Services Division in licensing and regulating manufactured home communities. If your proposed community is located within the boundaries of one of the following local or county offices, please contact them directly for licensing and regulating assistance:
